

Abstract of th Disclosure

Tool holder devices are provided, which are designed to hold tools having spring clip mechanisms. In one aspect, a tool holder device comprises a guiding portion and a 5 mounting portion. The mounting portion is adapted to engage a spring clip of a tool for mounting the tool. The guiding portion is adapted to guide a spring clip towards the mounting portion as a person slides the tool from the guiding portion to the mounting portion while maintaining 10 contact between the spring clip and the guiding portion.
